GO BEYOND THE LIMITS

Unparalleled configuration possibilities!
No CODE technology

The No Code: an asset for digitization

We are witnessing the sinking of the traditional company in profit of the digital one.

Some companies are trying to get into the lifeboat of forced digitization, while others are getting into the fast boat of thoughtful digitization that will get them ahead of the competition.

Digitization is an opportunity to put in place a **more efficient organization, less expensive to operate and which will meet the need for immediacy.**

But how can we innovate if we rely on a fixed software? Evolutions through specific developments are expensive and long to implement. They do not fit well with the need for constant progress.

The solution is the NO CODE technology.

Where the classic configuration allows to activate or deactivate already existing functions, the No code allows to **implement unique uses** specific to the company. The No Code is accessible to **company employees who are not computer specialists** and who have office automation skills.

Add a field, create a new form, change a user's rights, create an automatic processing, add an alert, customize the dashboard, add an input control, change the conditional display rules for certain fields... All this is within your reach with SIMAX !

SIMAX is the first management solution entirely based on your No Code technology.

That is to say that all its numerous modules have been described in this mode, which allows a total adaptability.

SIMAX is based on a mature technology (15 years of R&D), recognized (with international awards) and used by more than 500 companies.

At SIMAX, we believe that it is up to the software to adapt itself to the company and not up to the company to adapt itself to the software. And what about you?

Miren Lafourcade
General Manager of SIMAX

SIMAX

INTERFACING CHAMPION

Through its APIs, SIMAX communicates in real time with your Information System

THEY TRUST US!

« This is my fourth ERP installation and I've never seen anything like this before. As soon as I ask for a modification, the configurator does it for me right away. It's very flexible.

For Espace propreté, the main criterion of choice was the well-being of the employees.

With SIMAX and TIMAX (the mobile time management application), I saved 4 days per month on the completion of my invoicing and 5 days per month on the completion of the payroll liaison form, because everything is automated and only control tasks remain.

SIMAX has really been the digital springboard for Espace Propreté.»

MURIEL FOURNIER - Manager of Espace Propreté, 20 employees.

WHO ARE WE ?

It's not because we're computer professionals that we don't value the human element!

Quite the contrary! At SIMAX, we are convinced that a successful digitization is one that takes into account the human factor, that eliminates boring tasks, helps people communicate better, that promotes the transition between services and that avoids errors that are sources of tension. We choose partners who are able to humanize projects and take into account the needs of each person for a total adhesion of the users.

Besides, we take care in the elaboration of our products to encourage uses for people in a handicapped situation or having difficulties in writing French. This is why, for example, in SIMAX, it is possible to strongly zoom the characters for the visually impaired, all screens adapt dynamically accordingly. And in our mobile applications, it is possible to dictate texts to save time and facilitate access for those who have difficulty writing.

Digitization is also a paperless goal for us and for our customers with many beneficial effects for the environment. That is why, in 2019, SIMAX has taken the decision to stop printing its brochures.

SIMAX is a human-sized company with 30 employees (France and abroad). We have put in place numerous measures to facilitate the balance between private and professional life of our employees with a company day-care center, teleworking opportunities, health insurance, luncheon vouchers... And we even have premises in a villa with swimming pool, kitchen and bathroom to feel at work as well as at home.

We like to work with companies that share our values.

If you also think that it is up to the software to adapt itself to the company and not up to the company to adapt itself to the software, join the SIMAX community www.simax.fr
